

Dashboard 5: Loan Profitability and Risk Analysis

Introduction:

Analyzing the **profitability and risk associated with loans**, together with the underlying **interest earnings**, **loan recovery trends**, and **risk exposures**, is vital for maintaining a healthy and resilient financial portfolio. Focusing on **interest earnings**, **recovery performance**, and **segment-wise risk metrics**, the dashboard delivers meaningful insights into revenue generation, repayment reliability, and potential areas of financial concern. These insights enable stakeholders to **identify high-revenue segments** more effectively while **mitigating financial risks**, allowing them to refine lending strategies that enhance overall portfolio profitability and reduce exposure to losses.

DAX Queries:

1. Total Interest Earned:

```
Total_Interest_Earned = SUM  
(bondora_data[interestandpenaltypaymentsmade])
```

2. Net Revenue from Loans:

```
Net_Revenue =  
SUM (bondora_data[interestandpenaltypaymentsmade]) -SUM  
(bondora_data[principalpaymentsmade])
```

3. Risk-Weighted Loan Exposure (%):

```
DIVIDE (  
    SUMX (  
        'bondora_data',  
        'bondora_data'[Total_Outstanding_Amount] *  
        'bondora_data'[Risk_Weight]  
    ),  
    SUM('bondora_data'[amount])  
)
```

4. High Risk Borrower (%):

```
High-Risk_Borrower(%) =  
DIVIDE(  
    COUNTROWS(  
        FILTER(  
            'bondora_data',  
            'bondora_data'[rating] IN {"AA","A","B","C"}  
        )  
    ),  
    COUNTROWS('bondora_data')  
)
```

5. Total Principal Recovery:

```
Principal_Recovery = SUM (bondora_data[principalpaymentsmade])
```

Visualizations:

Visualization	Visualization Type
Total Interest Earned	KPI Card
Net Revenue from Loans	KPI Card
Risk-Weighted Loan Exposure (%)	KPI Card
High Risk Borrower (%)	KPI Card
Total Principal Recovery	KPI Card
Interest Revenue Distribution Bar Chart	X-axis: Loan duration(months) Y-axis: SUM (interestandpenaltybalance)
Loan Recovery & Net Revenue Stacked Column Chart	X-axis: useofloan Y-axis: SUM (principalpaymentsmade) SUM (interestandpenaltypaymentsmade)
Risk Exposure by Credit Score Bubble Chart	X-axis: Repayment Period(months) (bins) Y-axis: Count(loanid)
High-Risk Borrower % Trend Line Chart	X-axis: loandate Y-axis: High-Risk_Borrower(%)
Revenue v/s Risk Comparison Dual axis chart	X-axis: rating Y-axis: SUM (interestandpenaltypaymentsmade) [Bar] SUM (RiskWeighted_Loan-Exposure (%) [line]

Filters & Slicers:

- Loan duration (months)
- Rating
- Amount
- Status
- Loandate

Conclusion:

Evaluating profit margins across loan categories provides a clear understanding of which segments deliver the strongest financial performance, **emphasizing the loan categories that generate the highest profit margins**, while risk-exposure metrics reveal areas that require closer attention, **bringing visibility to risk levels and supporting stronger risk management**. This combination of profitability insights and risk visibility **strengthens proactive decision-making in loan pricing and overall risk assessment**, reinforcing portfolio optimization and long-term stability. With interactive filters and slicers enhancing exploration across borrower segments, loan types, and time periods, the dashboard equips stakeholders with a comprehensive, data-driven foundation for more strategic and resilient lending decisions.
